

Does renewable electricity generation reduce electricity prices?

**Victoria
Energy Policy
Centre**

 **VICTORIA
UNIVERSITY**
MELBOURNE AUSTRALIA

Agenda

- Introduction to Victoria Energy Policy Centre
- South Australia price study
- Extension to rest of the NEM
- Some comments on coal closure and market power

About VEPC

- Academic Centre within Victoria University. Foundation funding from Government of Victoria.
- Research team
 - **Steven Percy** – PhD (electrical engineering)
 - **Stephanie Rizio** – economics, PhD (social psychology)
 - **Dong Wang** – electrical engineering and economics, PhD (economics)
 - **Bruce Mountain** – electrical engineering, PhD (economics)
- Research agenda
 1. Retail markets
 2. Wholesale electricity market design in context of rapid decarbonisation
 3. Economics of storage.

South Australian Energy Generation in 2018

3 GW Gas Capacity

Two interconnectors with Victoria.

0.6 GW of Liquid Fuel Generation

1.9 GW Wind Capacity

0.2 GW large scale solar and 0.6GW of rooftop solar

No coal generation

Source: <http://www.aemo.com.au/aemo/apps/visualisations/map.html>

Wind energy reduces wholesale prices

1MWh of wind generation would reduce wholesale energy prices by \$0.09/MWh

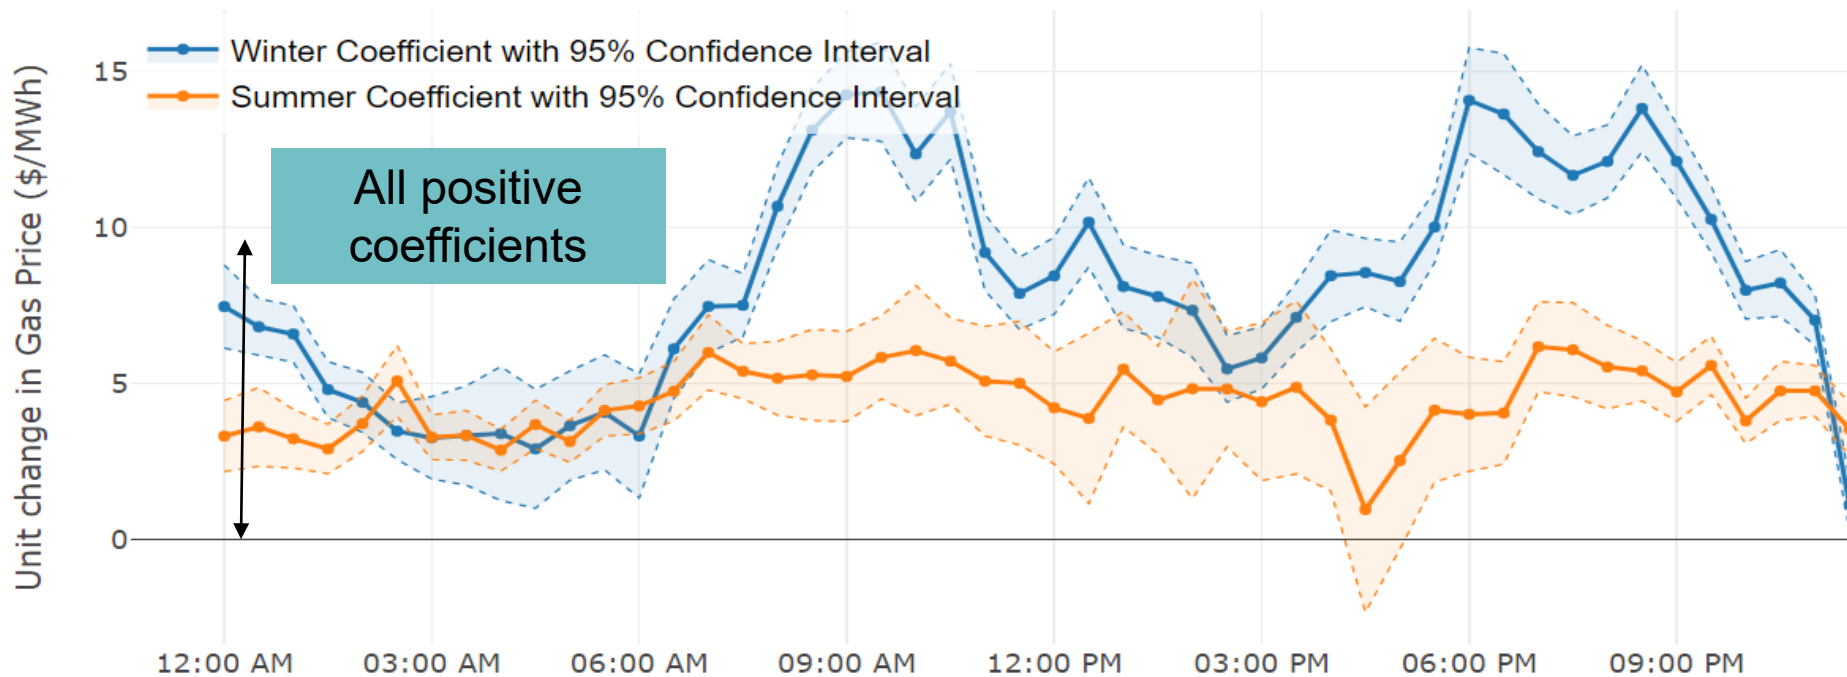

Rooftop solar reduces wholesale prices

1MWh of Solar generation would reduce wholesale energy prices by \$0.21/MWh

Gas Price increases wholesale prices

On average \$1/GJ change in gas price increases electricity prices by \$6/MWh

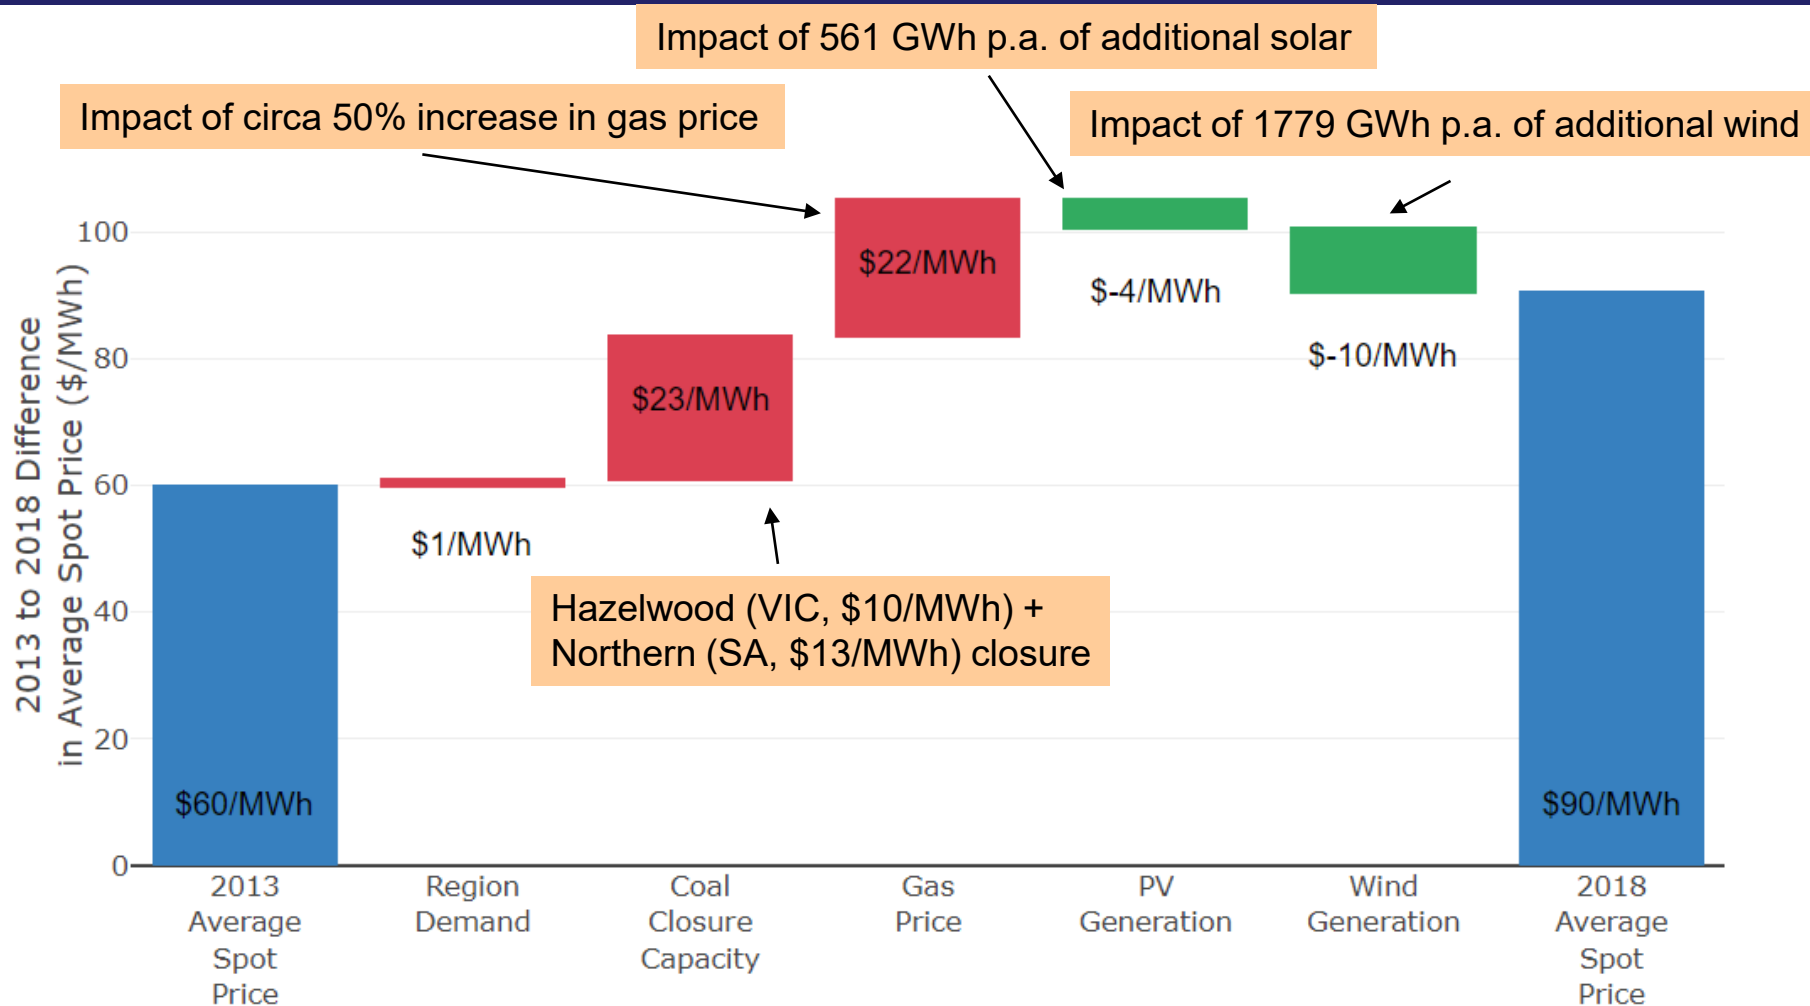

Available Coal Capacity Reduces Prices

On average 1MW reduction in available coal capacity increases electricity prices by \$0.03/MWh

How do we explain the 50% increase in spot prices from 2013 to 2018 ?

- Average cost of renewables subsidy from 2013 to 2018: \$11/MWh.
- Price reduction attributable to renewables in 2018: \$38/MWh.

NSW

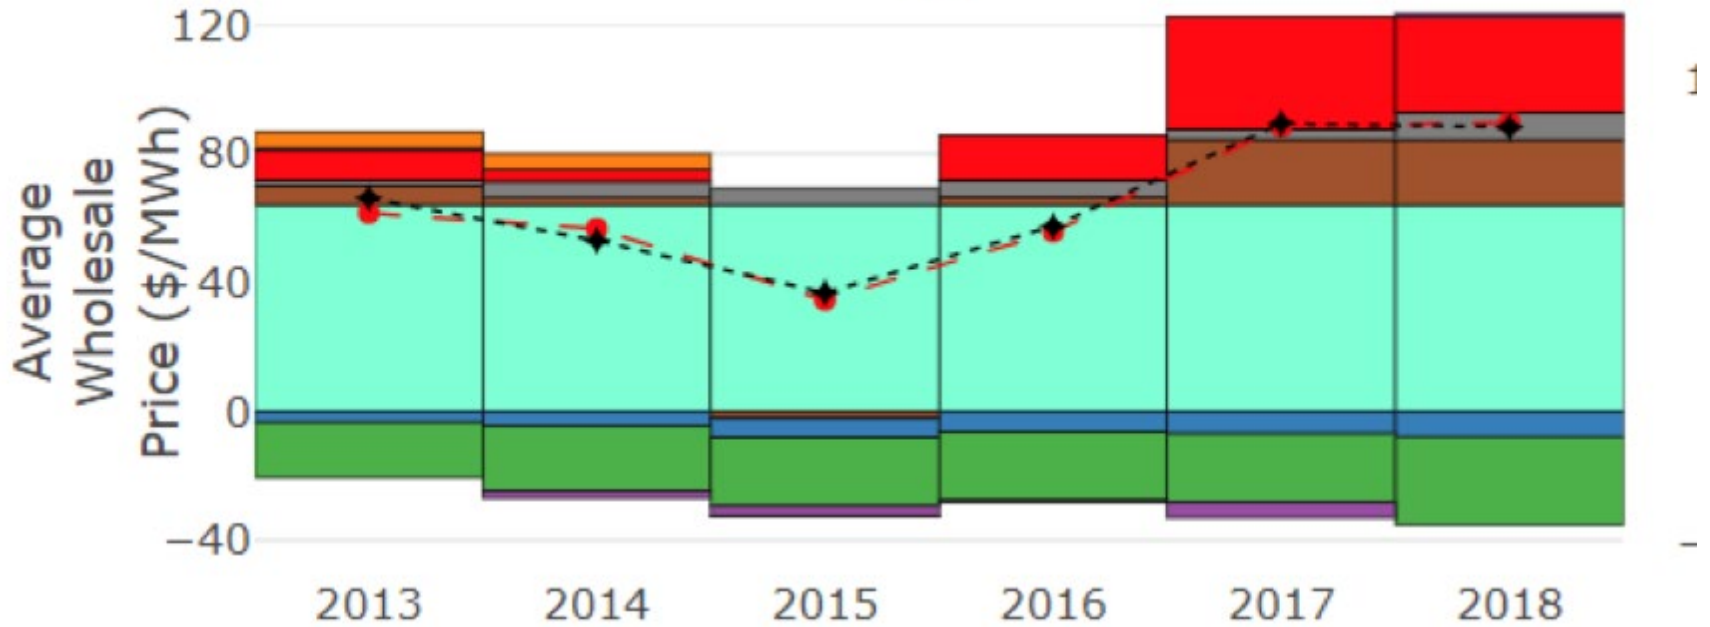

VIC

- 2012 Average Price (Zero Wind or Solar)
- Change in Gas Price
- Change in Demand
- Change in Coal Capacity
- Small and Large Scale Solar
- Change in Interconnected Coal Capacity
- Wind Generation
- Carbon Price
- Measured Average Price
- Simulated Average Price

SA

- 2012 Average Price (Zero Wind or Solar)
- Change in Gas Price
- Change in Demand
- Change in Coal Capacity
- Small and Large Scale Solar
- Wind Generation
- Carbon Price
- Change in Interconnected Coal Capacity
- Simulated Average Price
- Measured Average Price

QLD

- 2012 Average Price (Zero Wind or Solar)
- Change in Gas Price
- Change in Demand
- Change in Coal Capacity
- Small and Large Scale Solar
- Carbon Price
- Change in Interconnected Coal Capacity
- Wind Generation
- Simulated Average Price
- Measured Average Price

Average Model coefficients

	SA	VIC	QLD	NSW
Intercept (2012 Average Price)	64.1	36.6	32.3	32.7
Unit change in Gas Price	6.9	4.7	5.9	6.3
Inclusion of a Carbon Price	5.1	8.7	11.3	9.8
Unit change in Region Demand Before Small Scale Solar	0.11	0.03	0.03	0.02
Unit change in Interconnected Coal Capacity	- 0.0039	- 0.0015	-0.0034	-0.0064
Unit change in Coal Capacity	-0.05	-0.025	-0.012	-0.008
Unit change in Wind Generation	-0.087	-0.056	-	-0.028
Unit change in Small and Large Scale	-0.165	-0.072	-0.062	0.005

Market power and coal closure
